PURCHASE OF MEDICAL EQUIPMENT

Decision on which instrument to purchase is taken after considering its quality, utility and safety of patients and personnel.

Those instruments which have good local and international repute and dependability are considered.

Also to be taken into consideration is repute of the vendor whether he can provide dependable after sales service.

While purchasing equipment for Government hospitals consideration has to be given to the fact that multiple users handle the instruments and a large number of patients have to be examined/operated. Thus any instrument should be sturdy, dependable and the vendor should be able to provide service.

Equipment whose technology is outdated or the instrument does not enjoy good repute nationally or internationally is not considered.

Vendors whose after sales service is dependable are preferred.

NIT No. SPCB/18/299-T

Item No. 02 Applanation Tonometer:

Original gold standard Haag Strait Tonometer approved, it has long life and accuracy, rest of tonometers are not as durable and may not be repairable as experience has shown.

Item No. 20 Phacoemulsification unit:

Equipment with better and newer technology considered. Also reliability and safety of equipment as well as after sales service considered.
