Sindh Public Procurement Regulatory Authority

Foreword

Procurement is an important step for efficient drug management and supply system. An effective procurement process ensures the availability of the right drugs in the right quantities, at reasonable prices, and at recognizable standards of quality. Problems can often be encountered if procurement is carried out without such a systematic process, for instance the needed medicines are out of stock, overstocks and wastage of resources, and purchase of low quality products.

Given the impact of procurement activities on the operation and effectiveness of health services, it is essential that these activities be performed by trained staff using sound procedures. Effective procurement is a collaborative process between the procuring agency, having trained staff, an appropriate management system, and Provincial Formulary Committee which make decisions as to which drugs to buy, in what quantities and from which suppliers.

This document is especially intended for procuring agencies to assist them in establishing an effective procurement system, which is of critical importance for a reliable and good quality health service.

In this document the word “drug” is used for “any natural or artificial made chemical which is used as medicine” as defined in Cambridge dictionary.
